Website Progress Report: October 2026

Prepared by	Prepared for	Date	Report
Prodman Nexus Solutions, Sathish Kumar M	Dr. Divya S, Dr. Divya's Phoenix Dental Care	27 October 2026	What we completed this month, what it means for the clinic, and the new website health score

Index

#	Section	What you will find
1	At a glance	The new score and the month in five lines
2	Website health score: before and now	54 / 100 on 12 October, 78 / 100 today
3	What we did and what it means for you	Each piece of work, the benefit, and how you can see it
4	What is working well on the website now	The good things, in one list
5	Google's website test: before and now	Speed, accessibility and search scores for four key pages
6	What is still open, and who does it	Prodman Nexus, the design team (Akash) and you
7	What we need from you	Access, facts and decisions
8	What happens next month	November plan
A	Appendix: every issue, then and now	All 45 issues from the October audit with today's status

1. At a glance

Topic	In short
New score	**78 / 100**, up from **54 / 100** on 12 October (+24).
What changed	Google is now pointed to your official website on every page. Every page has a clear name and description for Google. Google and AI assistants now get a full "fact card" about the clinic and Dr. Divya. Patients' common questions are answered on the main pages. Two new pages help patients from nearby areas find you. The website software is updated and safer.
Issues fixed	**16 of 45 fixed fully, 6 partly.** Search settings went from 29 to 87, and AI readiness from 73 to 89.
Still holding the score back	The contact form may not deliver messages, and the home page photos are very heavy. Both are with the design team (Akash).

Topic	In short
Urgent for you	The domain name expires on **13 November 2026**. We will renew it on your behalf: please approve the renewal (Section 7).

> **About timing.** The website changes are live today. Google usually shows them within **1 to 4 weeks**, and better positions build over **2 to 3 months**. AI assistants usually take longer. Nobody can promise a position in Google; we will report real numbers every month.

2. Website health score: before and now

Overall score: 78 / 100, up from 54. Status: Needs attention (because two critical items with the design team are still open)

Area	Share of score	12 October	27 October	Change	Status today
Search settings (technical SEO)	30%	29	**87**	+58	Good
Speed (performance)	25%	59	**72**	+13	Critical: heavy home page photos (design team)
Design and ease of use (UI/UX)	20%	65	**65**	0	Needs attention (design team)
AI assistant readiness (AEO)	15%	73	**89**	+16	Good
Security and health	10%	67	**78**	+11	Critical: contact form (design team)
Total	**100%**	**54**	**78**	**+24**	Needs attention

How the score works: each area starts at 100, and every open issue takes points off (critical 15, high 7, medium 3, low 1). A partly fixed issue is counted at the size of what is left. The method is the same every month, so the scores can be compared. Status key: Good is 80 or more; Needs attention is 50 to 79; Critical is below 50, or any open critical issue.

Issues	12 October	27 October
Fixed fully	0	**16**
Partly fixed	0	**6**
Still open	45	**23** (15 with the design team; 8 waiting for your access or decisions, or for our next check)
New issues found	45 (first report)	**0** new website issues

3. What we did and what it means for you

#	What we did	What it means for you	How you can see it
1	**Pointed Google to your official website on every page**, in the site map and in every search setting. The old, broken address is gone from the website.	Google no longer sends people to a broken address. It can now list and rank the real website.	Search your clinic name on Google in the next few weeks: the result opens your official website.
2	**Wrote a clear page name and description for all 22 pages**, using the words patients search for (for example "Root Canal Treatment in Chitlapakkam").	Your results in Google look clear and local, so more people click them.	Look at the browser tab on any page, or at the clinic's results in Google.
3	**Fixed the page headings and added descriptions to every photo.**	Google understands what each page is about. Visitors who use screen readers hear what each photo shows.	Google's website test now gives **100 / 100 for search** on every page tested (Section 5).
4	**One clinic name everywhere: "Dr. Divya's Phoenix Dental Care"**, including the WhatsApp message patients send.	Google and AI assistants see one clinic, not four slightly different names.	Tap "Chat on WhatsApp": the message starts with the correct clinic name.
5	**Gave Google a full "fact card"** for the clinic (address, map location, opening hours, logo) and for Dr. Divya (BDS, MDS, Pediatric and Preventive Dentistry, her roles).	Google Maps, Google search and AI assistants can describe the clinic and Dr. Divya correctly.	Google's free Rich Results Test (we can show you) lists the clinic as a local dental business.
6	**Added 10 common patient questions with clear answers** on the Home, Contact, Team and Tooth Replacement pages, on top of the existing questions on 10 treatment pages.	Pages can appear for question searches ("Is the clinic open on Sunday?") and be quoted by AI assistants and voice search.	Scroll to "Frequently Asked Questions" on those pages.
7	**Two new pages: "Areas We Serve"** (Selaiyur, Sembakkam, Rajakilpakkam, Madambakkam, Gowrivakkam, Tambaram, East Tambaram, Camp Road) **and "How to Choose a Dentist"** (a 7-point checklist for families).	Patients searching from nearby areas can find the clinic. The checklist answers a common question in a helpful, rule-friendly way.	Both are linked at the bottom of every page, under "Clinic".
8	**Updated the website's software to the latest safe version.** 37 publicly known security weaknesses are closed.	A safer website that is less likely to be attacked or taken offline. The treatment pages also now load much lighter photos: the Services page went from about 19 MB to under 1 MB.	Treatment pages open faster on phones (Section 5).
9	**Added extra safety settings for browsers.**	Extra protection against common tricks, such as another site showing your pages inside its own.	Live on every page today. A free online checker confirms all five protections.
10	**Added the clinic logo as the website icon** for browser tabs, bookmarks and phone home screens.	The clinic looks finished and recognisable, not a blank icon.	Save the website to your phone's home screen.
11	**Added proper sharing previews.**	When anyone shares a page on WhatsApp or Facebook, it shows the logo, page name and description instead of a bare link.	Paste a page link into a WhatsApp chat with yourself.
12	**Added a short clinic summary written for AI assistants**, listing the clinic's details, doctor, treatments and key pages.	ChatGPT, Gemini, Perplexity and Claude have accurate facts to read.	Results show over the coming months (Section 8).

#	What we did	What it means for you	How you can see it
13	**Gave clear names to links and buttons** (for example "View all treatments", the map and the Instagram icon).	Easier for Google and for visitors who use screen readers.	Part of the higher accessibility scores in Section 5.
14	**Kept all wording within the dental advertising rules.** No "best", "top" or "No. 1", no promises, and no new testimonials, offers or before-and-after photos.	Protects the clinic under the National Dental Commission's advisory of 14 October 2026.	All new text uses words like "gentle", "comfortable" and "child-friendly".

4. What is working well on the website now

Search and AI	Patients and trust	Safety and health
• Every page tells Google the correct, official address. • All 22 pages have their own clear name and description. • **Search score 100 / 100** on every page tested. • One main heading per page, in the right order. • Every photo has a description. • Google gets a full fact card for the clinic, the doctor, each treatment and the patient questions. • 60 patient questions answered across 14 pages. • Google and AI assistants (ChatGPT, Claude, Perplexity and others) are allowed to read the site, and have a short clinic summary to read. • The site map lists all 22 pages with the date they were last updated.	• The clinic name, address, phone and email are the same on every page. • Phone, email and WhatsApp work with one tap. The WhatsApp message uses the correct clinic name. • Two new pages for nearby areas and for families choosing a dentist. • Treatment pages show Dr. Divya's name and qualifications. • Treatment pages and Services now open in about 2.5 seconds on a phone in Google's test. • Sharing a page on WhatsApp or Facebook shows a proper preview with the logo. • The clinic logo shows in browser tabs and on phone home screens. • Works on phones without sideways scrolling.	• Secure connection (padlock); certificate valid to 25 December 2026 and renewed automatically. • Website software is up to date; 37 known security weaknesses closed. • Extra browser safety settings added. • Every page loads; a missing page shows a proper "not found" page. • Old-style addresses redirect to the correct page. • No errors on the home page.

5. Google's website test: before and now

Google's free website test (called Lighthouse) scores each page out of 100; **90 or more is good**. Each figure is one test run, so treat it as a guide: scores move a few points between runs.

Page	Device	Speed: before → now	Accessibility: before → now	Good practice: before → now	Search: before → now
Home	Phone	39 → **60**	74 → **86**	100 → 100	92 → **100**
Home	Computer	64 → 64	74 → **86**	100 → 100	92 → **100**
Services	Phone	98 → 91	90 → **96**	100 → 100	100 → 100
Services	Computer	90 → **98**	90 → **96**	100 → 100	92 → **100**

Page	Device	Speed: before → now	Accessibility: before → now	Good practice: before → now	Search: before → now
Root Canal Treatment	Phone	81 → **95**	90 → **96**	100 → 100	100 → 100
Root Canal Treatment	Computer	75 → **100**	90 → **96**	100 → 100	92 → **100**
Contact	Phone	100 → 99	91 → **93**	100 → 100	100 → 100
Contact	Computer	100 → 99	91 → **93**	100 → 100	100 → 100

What this shows	In plain words
Search is now 100 on every page.	The search settings we fixed are complete.
Treatment pages and Services are now light and fast.	The Services page went from about 19 MB to under 1 MB and the Root Canal page from about 19 MB to under 1 MB. They now open in about 2.5 seconds on a phone.
The home page is still heavy (about 12 MB) and slow on phones.	Its photos are still the original camera files, some 4 to 12 MB each. A healthy page is under 2 MB. This is the design team's first speed task. The page does respond faster when tapped now (frozen time down from 1.2 seconds to 0.2 seconds).
Accessibility is up but not yet 90+ on the home page.	The pink text colour is too faint for some readers, and the map and slider dots need labels. These are design team tasks.

6. What is still open, and who does it

A. Prodman Nexus (us)

What	Why it is not done yet	When
Renew the domain name before it expires on 13 November 2026	Needs your approval of the renewal (Section 7)	Before 13 November
Connect Google Search Console and Google Analytics, and submit the site map	Needs your access (Section 7)	As soon as access is given
Send visitors from the old web address to the official website	Needs your decision and access to the old address	After your decision
Add your Instagram and Facebook pages to Google's fact card	Needs your real page links	When you send them
More patient questions (payment, parking, first visit, braces age and others)	Needs your answers	When you send them
List the clinic on Google Maps, Bing, Apple Maps and directories	Needs your Google Business Profile access and approval	November

B. Design team (Akash)

These were assigned to the design team in the October audit. We have sent Akash a separate brief. Today they hold back about 15 points of the score.

What	Why it matters	Priority
Fix the contact form so every enquiry reaches the clinic	Today a patient sees "Message Received!" but the clinic may not receive anything. Lost enquiries are lost patients.	🔴 Critical
Shrink the home page photos	The home page is about 12 MB; phone visitors wait and leave.	🔴 Critical
Easier-to-read colours, and a Call / WhatsApp button that is always visible on phones	Pink text is faint for many readers; patients must scroll to find the number.	🟠 High
Visitor counters that show "0", typos in the offers text, the hosting badge, small buttons, labels for the map and slider, working social icons, Privacy Policy and Terms pages	A cleaner, more trustworthy first impression, easier for everyone to use.	🟡 Medium

C. Decisions on hold with you

Item	Status
The 3 testimonials and the home page offers	Kept as they are, waiting for your decision under the advertising rules. We have not added any new ones.
Detailed content for the 5 category pages (Preventive, Cosmetic, Restorative, Orthodontics, Tooth Replacement)	On hold by decision this month.
A Tamil version of the website	Your decision, when you want it.

7. What we need from you

#	What we need	Why
1	**Approval to renew the domain name (expires 13 November 2026)**	If it lapses, the website and any email on it stop working.
2	Access to **Google Search Console** for Prodman Nexus	To submit the site map, watch indexing and report real searches.
3	Access to the **Google Business Profile** (Manager)	For Maps listing, posts, and to change the name to "Dr. Divya's Phoenix Dental Care" with the full stop, to match the website.
4	A professional **photo of Dr. Divya**	For the Team page and Google's doctor details.
5	Your real **Instagram and Facebook page links**	For the footer icons and Google's fact card.
6	The **email or WhatsApp number** that should receive contact-form enquiries	So Akash can connect the form.
7	**Current timings**, including any lunch break and holidays	For the website and listings.
8	**Decisions**: testimonials, home page offers, and the wording for experience and designation	Advertising rules.
9	What to do with the **old web address** (we recommend sending it to the official website)	So old links stop showing an error.

#	What we need	Why
10	**Answers** for the held-back patient questions: first visit, payment methods, parking, how often to have a check-up, how long fillings and veneers last, the right age for braces	More questions answered on the website.
11	Switch on **two-step login (2FA)** for the website hosting account (phone app or text code)	This account controls the live website; two-step login stops anyone who guesses the password.

8. What happens next month

When	What	Who
Before 13 November	Domain renewed and auto-renew switched on	Prodman Nexus (with your approval)
When access is given	Search Console and Analytics connected, site map submitted, Bing connected	Prodman Nexus
November	Clinic listed on Google Maps, Bing, Apple Maps and key directories with the same details	Prodman Nexus (with your approval)
November	Contact form fixed and tested with one agreed test enquiry; home page photos optimised	Design team (Akash)
Early December	**November health check**: new score, Google search positions for the 12 tracked keywords, and answers from ChatGPT, Gemini, Perplexity and Claude to our 14 test questions	Prodman Nexus

Our target for the November report: 85 or more, once the contact form and home page photos are fixed.

Appendix: every issue, then and now

✅ Fixed · 🟡 Partly fixed (counted at the size of what is left) · ⏳ Open

Search settings (technical SEO): 29 → 87

Ref	Issue (plain words)	Priority in October	Today	Note
T1	Google was pointed to an old, broken web address	Critical	✅	Official address on every page
T2	The site map listed the wrong address and wrong dates	High	✅	22 pages, correct dates
T3	Five main pages had no "official address" tag	High	✅	All 22 pages have it
T4	Shared links showed no picture	Medium	✅	Logo preview on every page
T5	Several main headings on one page; headings out of order	High	✅	One main heading per page
T6	Home page photos had no descriptions	High	✅	Every photo described
T7	No Google Analytics or Search Console	High	⏳	Needs your access
T8	Partial clinic details for Google	Medium	🟡	Address, map, hours, logo added; social links wait for you (now Low)
T9	No icon for phones and bookmarks	Low	✅	Logo icon added
T10	Extra redirect steps between address forms	Medium	🟡	One extra step remains for one rarely used address form (now Low)
T11	Live website and stored version did not match	Medium	✅	Live site now built from the updated version
T12	Page names and descriptions too short, long or generic	Medium	✅	All 22 rewritten
T13	Five short category pages	Medium	⏳	On hold by decision
T14	Unnamed links and buttons	Low	✅	Clear names added
T15	No Tamil version	Low	⏳	Your decision

AI assistant readiness (AEO): 73 → 89

Ref	Issue (plain words)	Priority in October	Today	Note
A1	No short summary for AI assistants	Medium	✅	Added

Ref	Issue (plain words)	Priority in October	Today	Note
A2	Clinic name written four ways	High	✅	One name on the website; Google Business Profile to update
A3	Patient questions missing on key pages	High	🟡	Added to Home, Contact, Team, Tooth Replacement; more wait for your answers (now Low)
A4	No links to the clinic's social pages	Medium	⏳	Needs your links
A5	Three generic testimonials	Medium	⏳	On hold: advertising rules
A6	Opening hours to confirm	Medium	⏳	Needs your current timings
A7	Text inside images not checked	Low	⏳	We check next month

Speed (performance): 59 → 72 (design team)

Ref	Issue (plain words)	Priority in October	Today	Note
P1	Very large photos (4 to 12 MB)	Critical	⏳	Home page still about 12 MB
P2	Home page loads all its large photos first	High	⏳	
P3	Home page feels frozen on phones	High	🟡	1.2 s down to 0.2 s after the software update; target under 0.2 s (now Low)
P4	Files not saved by returning visitors' browsers	Medium	🟡	Design and script files now saved for a year; photos not yet
P5	Services and treatment pages heavy	High	✅	About 19 MB down to under 1 MB
P6	Doctor illustration downloaded on phones where it is hidden	Low	⏳	
P7	Extra code for old browsers	Low	⏳	

Design and ease of use (UI/UX): 65 → 65 (design team)

Ref	Issue (plain words)	Priority in October	Today	Note
U1	Pink text and buttons too faint	High	⏳	
U2	No Call / WhatsApp button at the top on phones	High	⏳	
U3	Home page photo area blank for several seconds	Medium	⏳	
U4	Visitor counters show "0" at first	Medium	⏳	
U5	Social icons that do nothing; no Privacy or Terms pages	Medium	⏳	

Ref	Issue (plain words)	Priority in October	Today	Note
U6	Small buttons and links on phones	Medium	⏳	
U7	Accessibility gaps	Medium	🟡	Headings, photo descriptions and link names fixed by us; map and slider labels and colours remain
U8	Typos in the offers text	Medium	⏳	Offers on hold: your decision
U9	"Powered by" hosting badge on the page	Low	⏳	
U10	Empty before-and-after gallery	Low	⏳	Stays hidden: advertising rules
U11	Map cannot be moved or zoomed	Low	⏳	Acceptable as it is

Security and health: 67 → 78

Ref	Issue (plain words)	Priority in October	Today	Note
S1	Contact form may not deliver messages	Critical	⏳	Design team
S2	Outdated website software with known weaknesses	High	✅	Updated; 37 weaknesses closed
S3	Missing browser safety settings	Medium	✅	All five live on every page
S4	Old web address shows an error	High	⏳	Needs your decision and access
S5	Small technical tidy-ups	Low	✅	Done

What we could not check this time

Item	Why
Google search positions and real visitor numbers	Search Console and Analytics not yet connected
Google Business Profile details	No access yet
Contact form delivery	Not tested, to avoid sending a fake enquiry to the clinic; it is the design team's fix
Answers from AI assistants	First full check in the November report
