Task 8 — Before and After: Software Update and Security Settings

Prepared by	Prepared for	Website	Status
Prodman Nexus Solutions — Sathish Kumar M	Dr Divya S	https://drdivyaphoenixdental.com	For review — development copy of the site, not live yet

What this task did: updated the website's framework to a version without the known security weaknesses, and added standard browser protections. **Nothing on the pages was meant to change, and nothing did:** three of the five key pages are pixel-for-pixel identical before and after.

1. Security warnings: before and after

	Before	After
Website framework (Next.js)	14.2.5 — **37 known weaknesses** (4 critical, 13 high, 16 moderate, 4 low)	**15.5.28 — 0 of its own**
React (page building blocks)	18.3.1	19.3.1 (needed by the new framework)
Image tool (sharp)	0.35.4 — 1 high	0.35.5 — fixed
Build tools (nanoid, source-map-js)	2 high	Fixed
Overall security check (`npm audit`)	5 packages: **1 critical, 4 high**	**1 remaining issue** (shown twice): an older PostCSS bundled inside Next.js 15

> **About the remaining item:** PostCSS only processes the website's own style files while the site is being built; visitors cannot trigger it. The only proper fix is the next major framework version (Next.js 16), which was not part of this task. We will re-check monthly.

2. Security settings added (sent to every visitor's browser)

Setting	What it does	Visible change
X-Content-Type-Options	Stops browsers guessing file types	None
X-Frame-Options	Stops other sites showing this site inside their pages	None
Referrer-Policy	Shares less browsing information with other sites	None
Permissions-Policy	Camera, microphone and location are switched off for the site	None
Strict-Transport-Security (incl. subdomains)	Always uses the secure https version	None

These take effect once Netlify deploys this code; we will confirm them on the live site then. The strictest setting (Content-Security-Policy) is left for a later, separate step, as agreed.

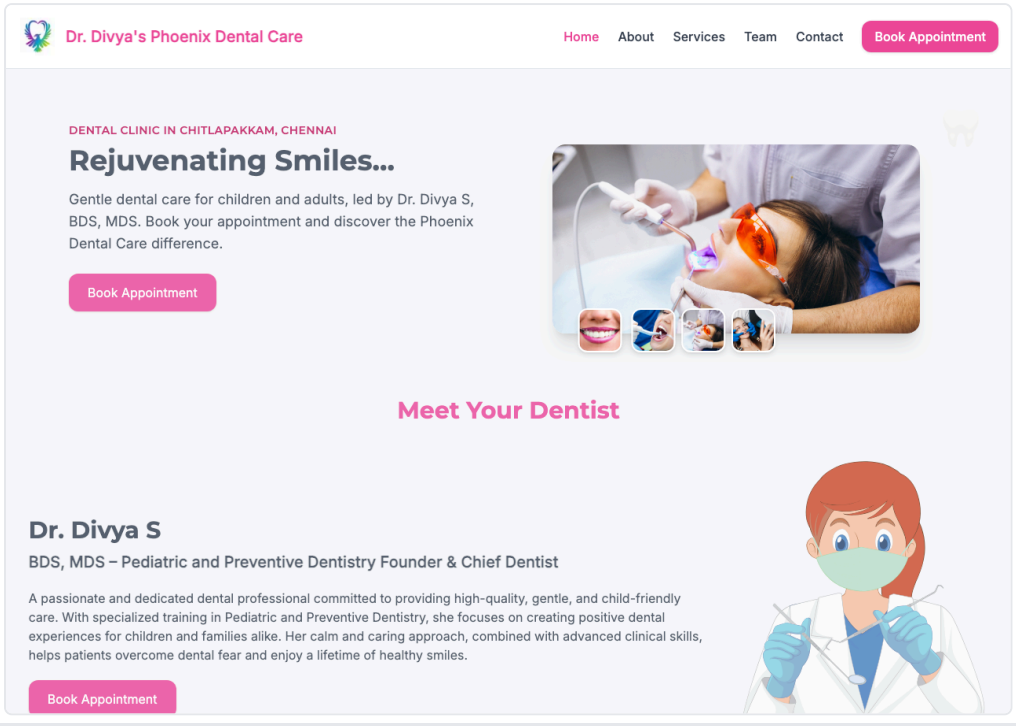

3. Screenshots: before (old version) and after (new version)

Both taken from the finished (production) build of each version, at the same size and timing.

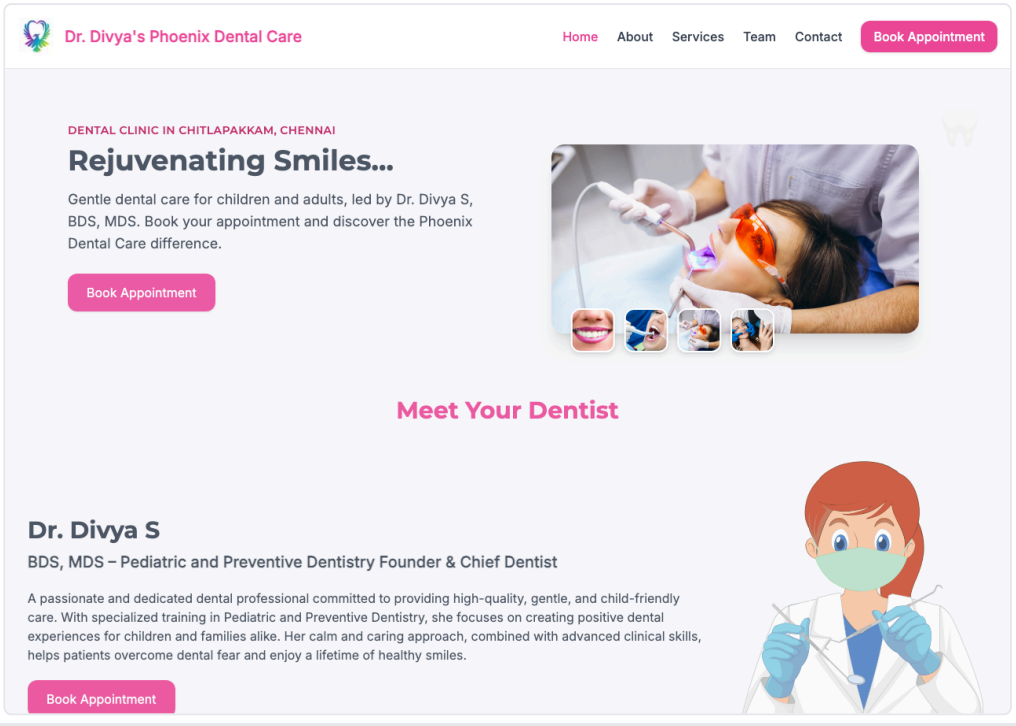

Page	Result
About	Identical, pixel for pixel
Contact	Identical, pixel for pixel
Root Canal Treatment	Identical, pixel for pixel
Services	Same; tiny image-smoothing difference only
Home (desktop and phone)	Same; the photo slider and fade-in were at a slightly different moment

Home — desktop

Before (Next.js 14)

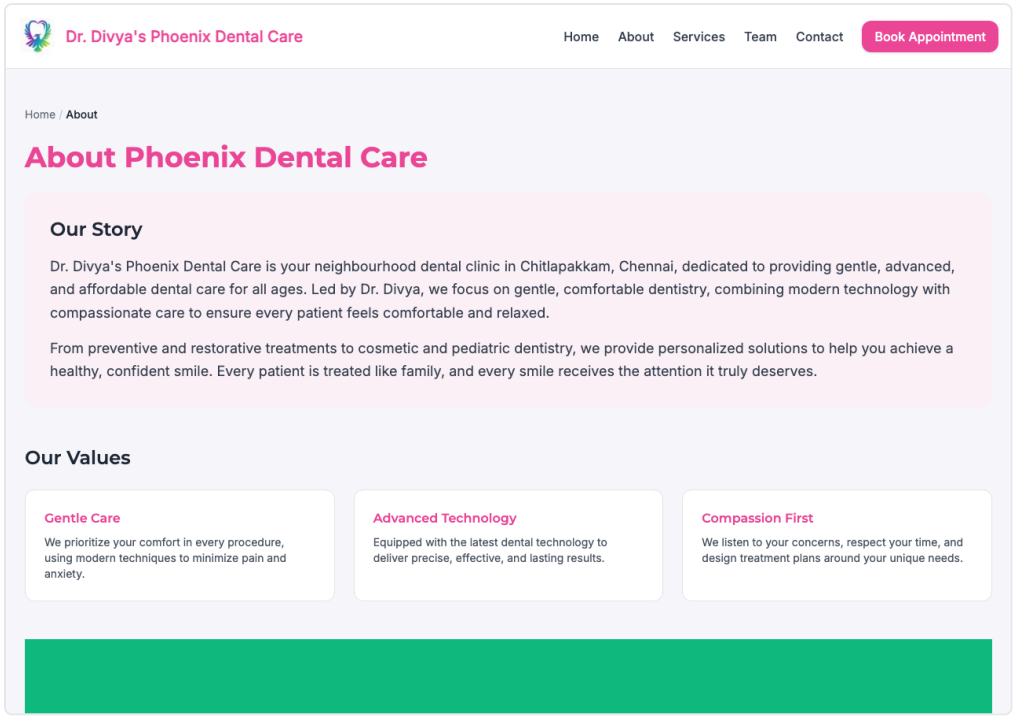

After (Next.js 15)

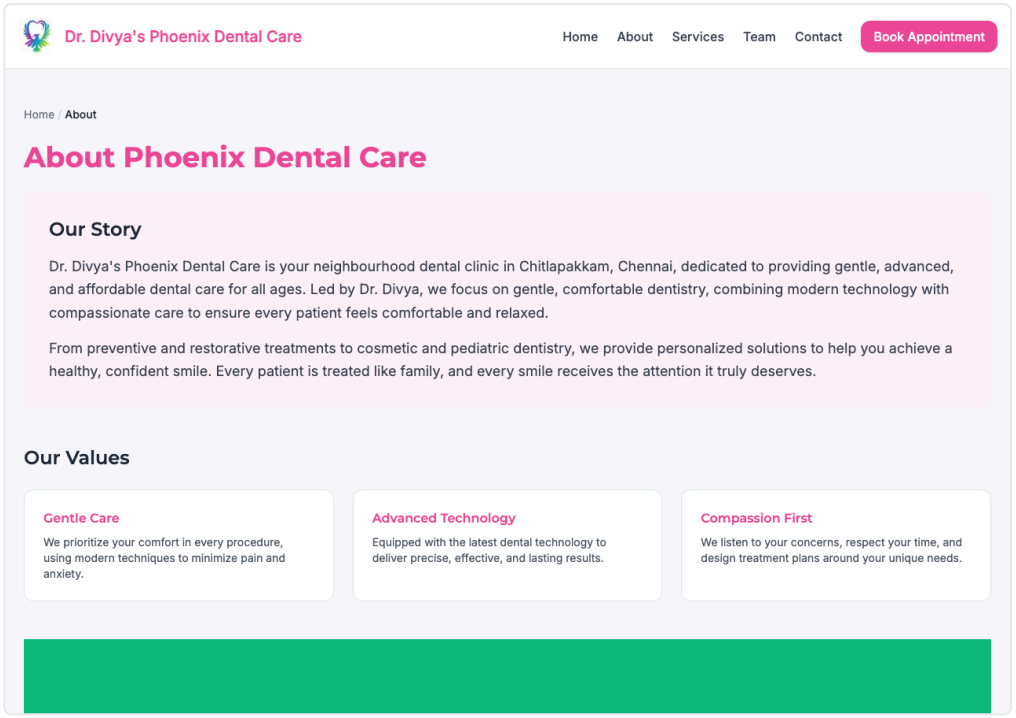

About

Before (Next.js 14)

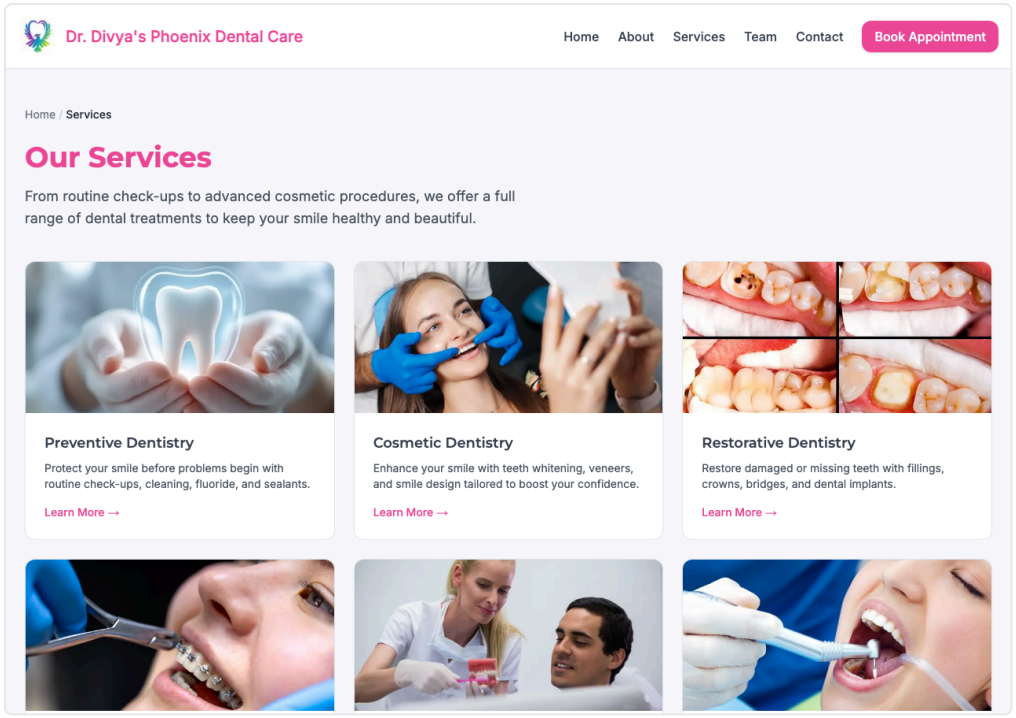

After (Next.js 15)

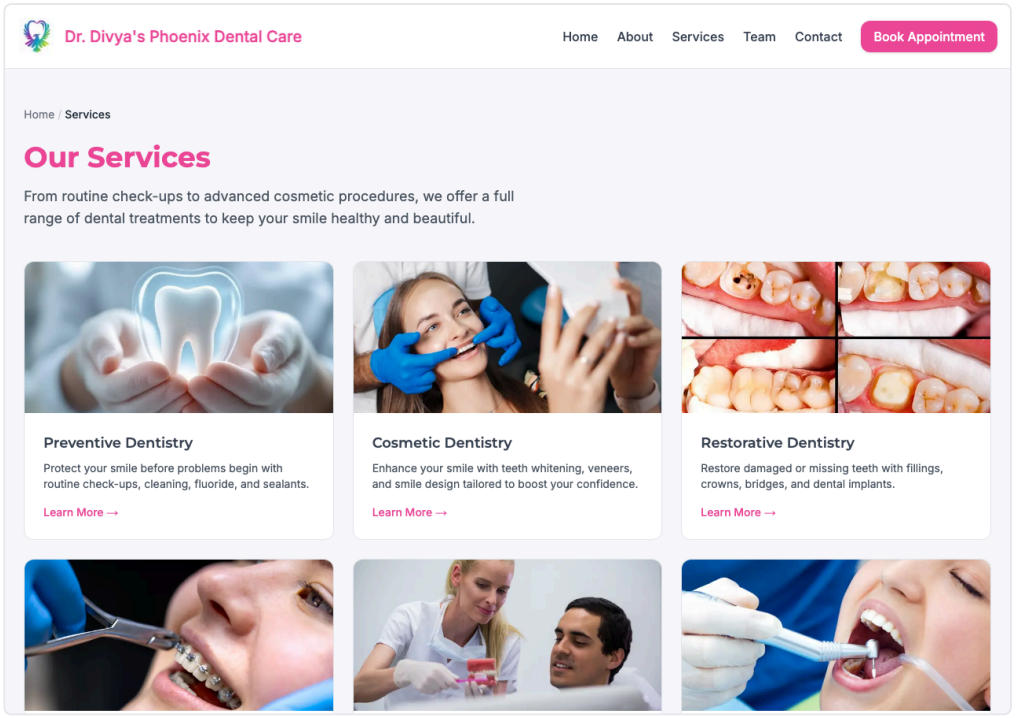

Services

Before (Next.js 14)

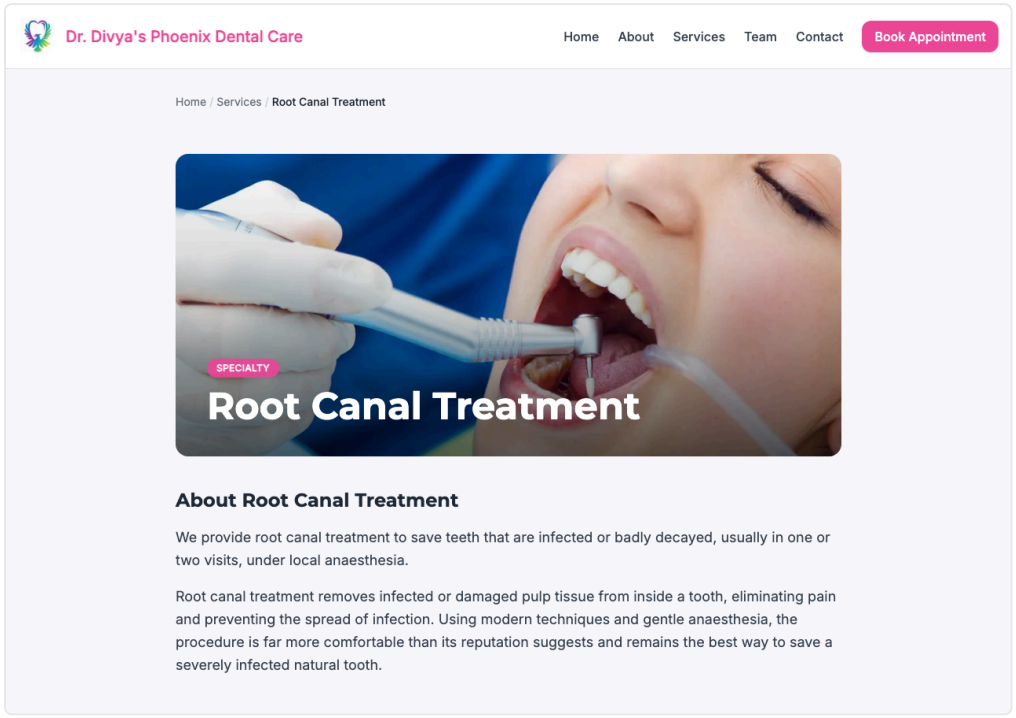

After (Next.js 15)

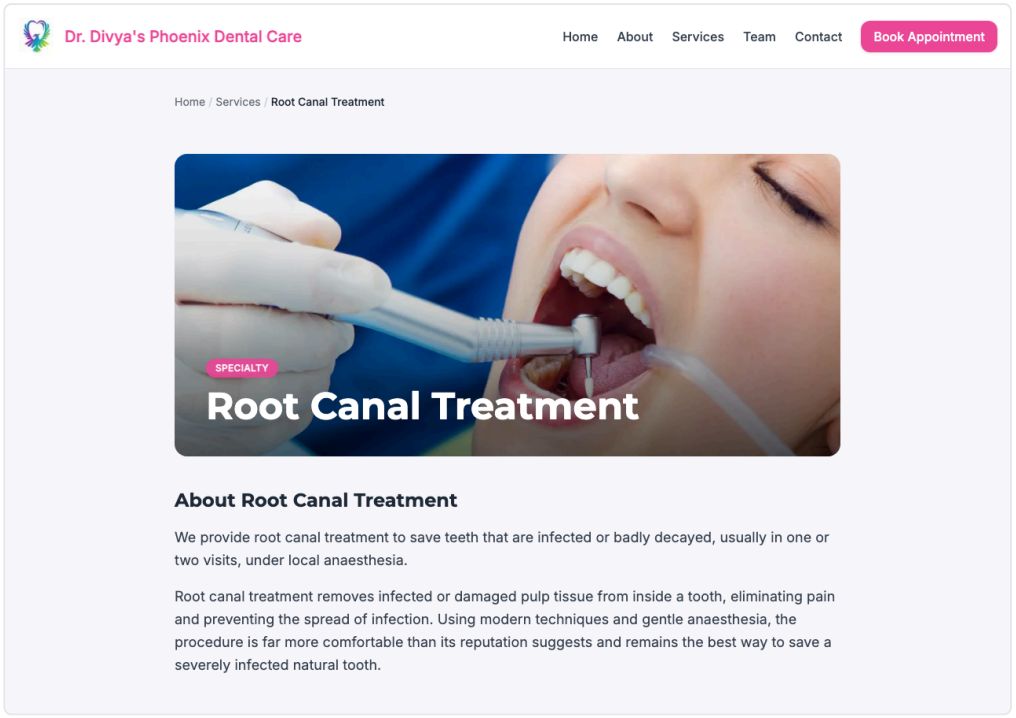

Root Canal Treatment

Before (Next.js 14)

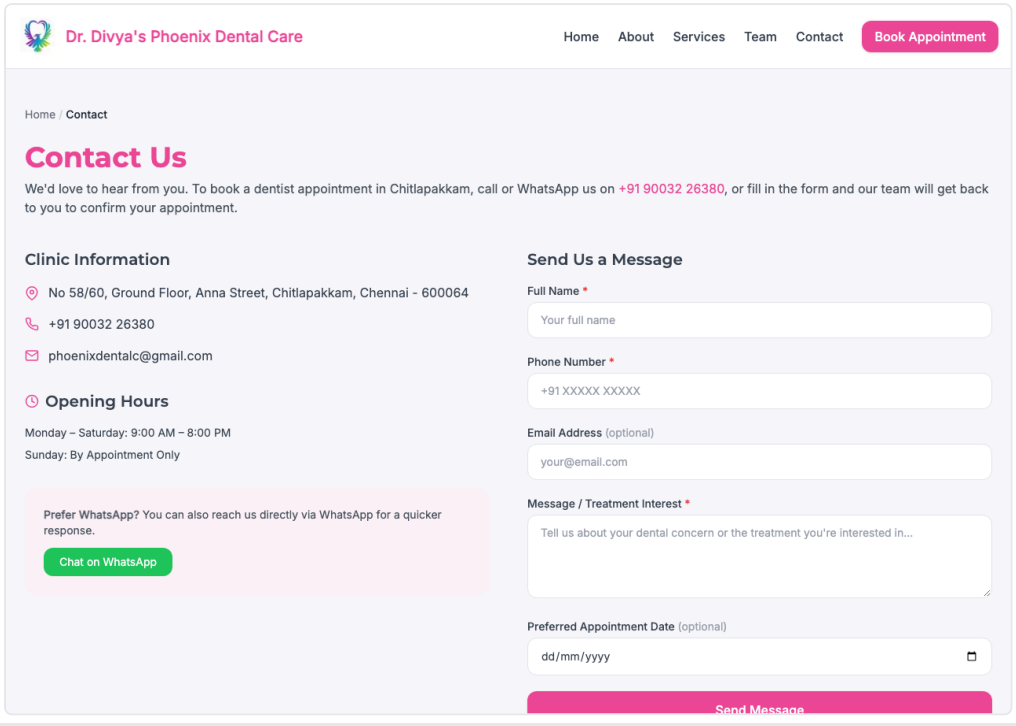

After (Next.js 15)

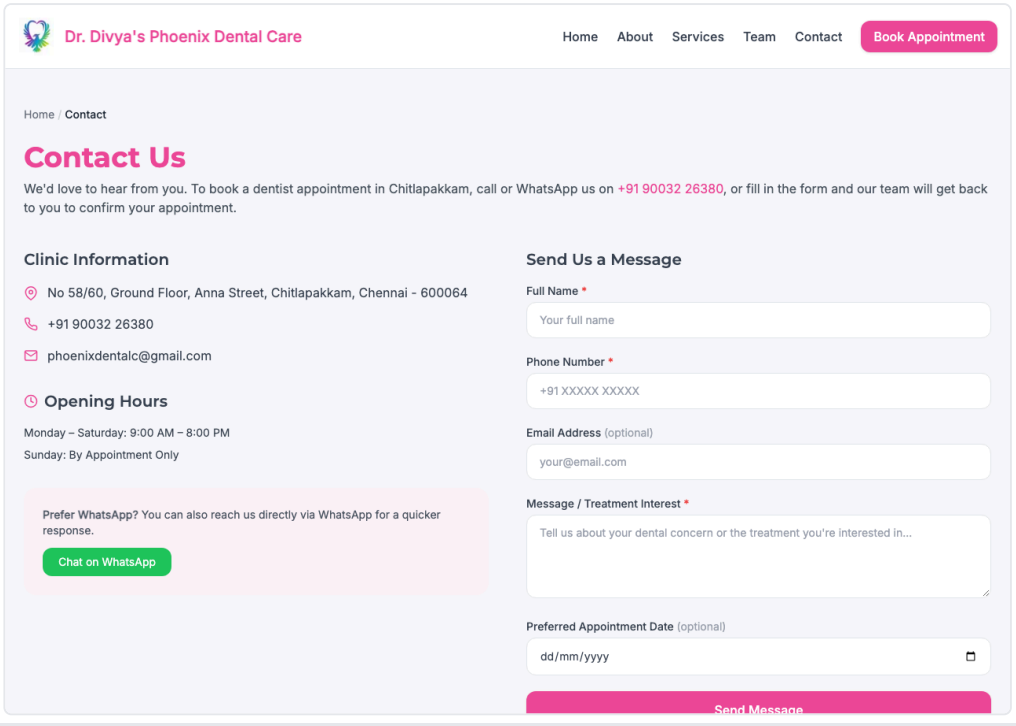

Contact

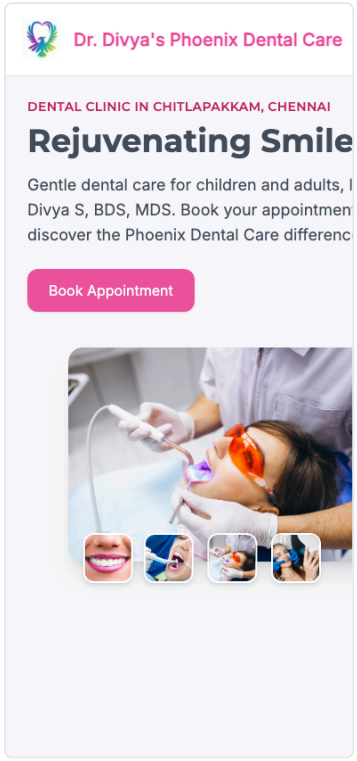

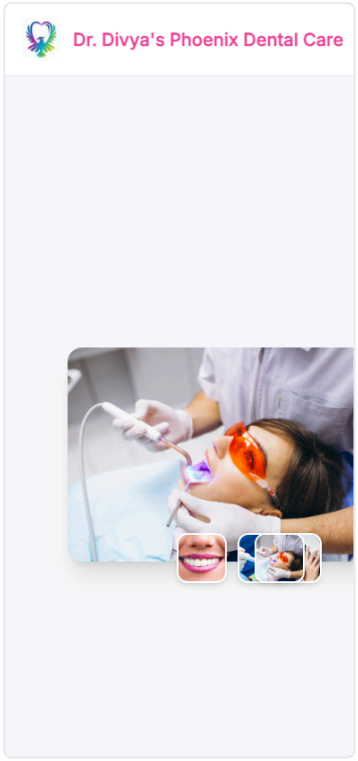

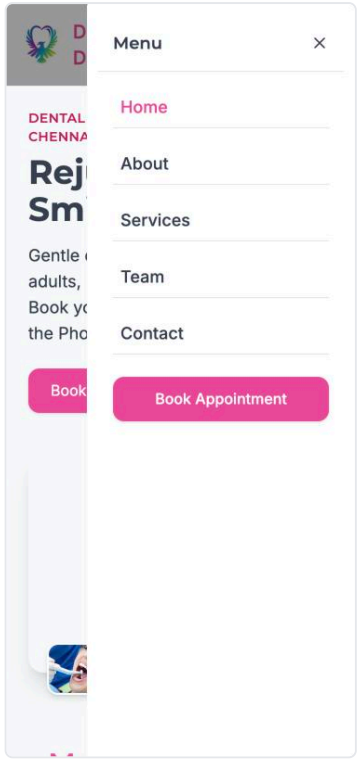

Before (Next.js 14)

After (Next.js 15)

Home — phone, and the phone menu

Before (Next.js 14)	After (Next.js 15)	After: phone menu still opens
		

4. Other checks

Check	Result
All 20 pages, robots file and sitemap load	✅
A missing page still shows the 404 page	✅
Page titles, descriptions, page addresses, headings, photo descriptions	✅ Unchanged on all 20 pages
FAQs and Google's clinic/doctor details (Tasks 4–5)	✅ Unchanged
Browser errors on the finished site (Home, Root Canal, Contact, Team)	✅ None
Phone menu, photo slider, FAQ open/close	✅ Working
Fonts (Inter, Montserrat) included in the build	✅
Page code size	Slightly larger: shared code 87 KB → 103 KB (Home 145 → 157 KB). Small next to the photos, which are several MB (Akash's task).

5. Added to Divya's action items

What	Why
OK to update the Google Business Profile name to **Dr. Divya's Phoenix Dental Care** (with the full stop)	So the name on Google matches the website exactly
