Website Health Report — Dr Divya's Phoenix Dental Care

Prepared by	Audit date	Website	Report type
Prodman Nexus Solutions	12 October 2026	https://drdivyaphoenixdental.com	Monthly website health check-up (first report)

1. Health Summary

Overall Website Health Score: 54 / 100 — Needs urgent attention

Section	Weight	Section score	Weighted points	Status
Technical SEO	30	29 / 100	8.7	🔴 Critical
Performance	25	59 / 100	14.8	🔴 Critical
UI / UX	20	65 / 100	13.0	🟠 Needs Attention
AEO (AI answer readiness)	15	73 / 100	11.0	🟠 Needs Attention
Security & Health	10	67 / 100	6.7	🔴 Critical
Total	**100**		**54.1 → 54**	**Needs Attention**

Status key: Good = 80 or more · Needs Attention = 50–79 · Critical = below 50, or any open Critical issue. Every open issue lowers its section score (Critical −15, High −7, Medium −3, Low −1); the same method is used every month so scores can be compared.

Lighthouse scores (live site)

Lighthouse is Google's free website test. Scores are out of 100 — 90 or more is good. Each result is a single test run, so use it as a guide rather than an exact figure.

Page	Device	Performance	Accessibility	Best Practices	SEO	LCP	CLS	TBT
Home `/`	Mobile	**39** 🔴	74	100	92	8.7 s	0.085	1,180 ms
Home `/`	Desktop	**64** 🟠	74	100	92	7.4 s	0.001	0 ms
Services `/services/`	Mobile	98	90	100	100	2.2 s	0.004	10 ms
Services `/services/`	Desktop	90	90	100	92*	0.9 s	0.001	0 ms
Root Canal `/services/root-canal-treatment/`	Mobile	81	90	100	100	4.9 s	0.004	0 ms

Page	Device	Performance	Accessibility	Best Practices	SEO	LCP	CLS	TBT
Root Canal `/services/root-canal-treatment/`	Desktop	75	90	100	92*	8.5 s	0	0 ms
Contact `/contact/`	Mobile	100	91	100	100	1.1 s	0.003	20 ms
Contact `/contact/`	Desktop	100	91	100	100	0.5 s	0.001	0 ms

LCP = time until the main content appears (good: under 2.5 s) · CLS = how much the page jumps while loading (good: under 0.1) · TBT = how long the page feels frozen after loading (good: under 200 ms). The Home page weighs 11.9 MB on mobile and 23.5 MB on desktop; a healthy page is under 2 MB. * Appeared on these two runs only; re-check next month.

At a glance

How your website is doing	Compared to last month	What is working well
• Your website looks professional and the treatment pages are well written. • Behind the scenes, it tells Google that your real website is a **different address that is currently broken**, so Google may not rank this site properly. • The home page is very heavy (some photos are 4–12 MB), so it loads slowly on phones. • The "Send Message" form appears **not to deliver enquiries** to the clinic, even though patients are told "Message Received!". • Your domain name renews on **13 Nov 2026**. Prodman Nexus is handling this on your behalf (see Section 5). **Top 3 to fix:** (1) point all search settings to drdivyaphoenixdental.com, (2) make the contact form really deliver enquiries, (3) shrink the photos.	• This is our first report, so there is nothing to compare yet. • Today's score: **54 / 100**. • Issues found: **45** (3 Critical, 14 High, 18 Medium, 10 Low) — all new. • Next month this column will show the score change ↑↓, issues fixed, and any new issues found.	• The website is secure (HTTPS) and the security certificate is valid until 25 Dec 2026. • All 20 pages load and every internal link works. • A missing page correctly shows a "not found" page. • Every page has its own title and description. • All 10 detailed treatment pages have step-by-step guides and FAQs. • Phone, email and WhatsApp links work with one tap; the map shows correctly. • Phone number, address and email are the same on every page. • The site works on phones without sideways scrolling. • AI assistants (ChatGPT, Claude, Perplexity) and Google are allowed to read the site.

2. Issues by Section

Legend — Priority: Critical / High / Medium / Low · Effort: S (<½ day) / M (1–2 days) / L (3+ days) · Status: **New** (all issues are new, as this is our first report).

A. Technical SEO

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
T1	Canonical, sitemap, robots, social and structured-data URLs all point to a **different domain** (`www.phoenixdentalcare.in`), which currently returns HTTP 500	Google is told your real website lives at another address — and that address is broken, like a signpost pointing to a closed shop. Google may ignore this site or show the wrong one.	Hard-coded in `app/sitemap.js:4`, `app/robots.js:7`, `app/layout.js:31`, `app/page.js:24,34`, `app/about/page.js:16`, `app/services/page.js:14,22–23`, `app/team/page.js:15,31`, `app/contact/page.js:14`, `app/services/[slug]/page.js:25,36,46`. Live `robots.txt` says `Sitemap: https://www.phoenixdentalcare.in/sitemap.xml`; `og:url`, canonical, JSON-LD `url` all use it. Fix: one `SITE_URL` constant/env var + `metadataBase` = chosen primary domain; **Primary domain confirmed by Divya:** `https://drdivyaphoenixdental.com` — use this for every URL above.	All 20 pages	Critical	S	New
T2	Sitemap lists the wrong domain, URLs **without** trailing slash (live site redirects them), and every `lastmod` is the same build timestamp (2026-10-04T07:24:50Z)	Google has a map of your site, but it's a map of another town — and every page is stamped "updated" on the same second, so it can't tell what's actually new.	`app/sitemap.js` uses `new Date()` for all URLs (shows build time, not real edits) and `baseUrl` of the old domain. All 20 indexable pages are present, none noindex/404. Fix: correct domain, match live trailing-slash convention, real `lastModified` per page (e.g. from a date field in `data/services.js`).	`/sitemap.xml`	High	S	New
T3	**No canonical tag** on the 5 core pages (Home, About, Services, Team, Contact); only the 15 treatment pages have one	Without a "this is the official address" note, Google may treat `/about` and `/about/` as two different pages.	`metadata.alternates.canonical` missing in `app/page.js`, `about`, `services`, `team`, `contact` pages. Treatment-page canonicals are absolute but not self-referencing to the live host (T1).	5 pages	High	S	New
T4	Open Graph / Twitter incomplete: Home, About, Services, Team, Contact have **no** `og:image`; no `twitter:image`; card is plain "summary"; `og:type` / `og:site_name` missing on those pages	When someone shares your site on WhatsApp/Facebook, it shows a bare link with no picture, which gets fewer clicks.	Each page sets its own `openGraph`, which **replaces** the layout's (so layout's image/site name/type are lost). Layout's only image is a logo on the wrong domain (T1). Fix: add `images`, `type`, `siteName` per page or a shared helper; add `twitter.images`. Treatment pages do have `og:image`.	5 core pages	Medium	S	New
T5	**Multiple H1s and skipped heading levels.** Home has 3 H1s (hero + two statistic counters showing "0"); About has 3. Home jumps H1→H3→H5→H3→H4; footer headings are H4 after H2.	Headings are the chapter titles search engines read. Several "Chapter 1" titles — two of which just say "0" — confuse them about what the page is about.	`components/Stats.js` renders counters as `<h1>`. `components/home/ourDoctor.js` uses `<h3>` then `<h5>`; `components/footer.js` uses `<h4>`. Lighthouse `heading-order` fails on Home. Fix: counters → `<p>` / `<div>`; sections H2; sub-items H3; footer H2/H3.	Home, About (+ footer on all)	High	S	New

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
T6	**6 images on the Home page have no alt text** (hero photo, 4 thumbnails, doctor illustration)	Search engines and screen readers can't tell what these photos show — like photos in an album with no captions.	Plain `<img>` without `alt` in `components/home/treatmentsHero.js` and `components/home/ourDoctor.js:33` (`doctor_profile.svg`). Lighthouse `image-alt` fails (SEO 92, Accessibility 74). All other pages' images have alt.	Home	High	S	New
T7	**No analytics and no Search Console verification** found	You can't see how many patients visit, where they come from, or get Google's warnings — flying without a dashboard.	No `gtag`/GTM/GA4/Clarity/Meta Pixel scripts and no `google-site-verification` meta in source; no TXT verification record in DNS. Search Console/GA4 account state itself is **Not verified** (no access).	All	High	S	New
T8	Structured data (JSON-LD) is partial	Rich information about the clinic (hours, map, photos, social profiles) isn't given to Google in the form it prefers, so results look plain.	Exists: `Dentist` (Home only), `Physician` (Team), `BreadcrumbList` (Services + treatments), `MedicalProcedure` + `FAQPage` (10 detailed treatments). Missing: `image`/`logo`, `geo`, `hasMap`, `sameAs`, `priceRange`, `areaServed`, Sunday hours, `aggregateRating`. `MedicalProcedure.provider.address` is a plain string (should be `PostalAddress`). `Physician` lacks `image`, `medicalSpecialty`. Valid JSON verified; Google Rich Results Test **Not verified**. Note: Google shows FAQ rich results only for well-known health/government sites, so FAQ markup helps AI answers more than Google snippets.	Home, Team, treatments	Medium	M	New
T9	Favicon is a `.jpeg`; no `favicon.ico`, **no apple-touch-icon, no web manifest, no theme-color**	When added to a phone home screen or bookmarked, the clinic shows a blank/default icon.	Only `<link rel="icon" href="/favicon.jpeg">`. `/favicon.ico`, `/apple-touch-icon.png`, `/manifest.json`, `/site.webmanifest` all 404. Fix: add `app/icon.png`, `apple-icon.png`, `manifest.js`.	All	Low	S	New
T10	Redirect chain and URL-format inconsistency	A small detour for visitors and search engines, and two spellings of the same page address.	`http://www…` → `https://www…` → `https://…` (2 hops; should be 1). `/about` → 301 → `/about/` (live uses trailing slashes), but the repo's sitemap/canonicals/breadcrumb JSON-LD use no slash.	All	Medium	S	New
T11	**Live site and repository don't match**	The code on GitHub isn't exactly what's online, so fixes made in GitHub may not behave the same live.	Live HTML emits trailing-slash links (`/about/`) and local `npm run dev` from `main` does not (308 → no slash); repo has no `next.config.js`. Which commit/branch Netlify deploys and its settings are **Not verified**.	All	Medium	S	New
T12	Title/description quality issues on several pages	Page names in Google results are short, generic or too long, so fewer people click.	See §3: 5 generic treatment pages (titles lack "in Chennai", descriptions 85–101 chars); Home title doesn't say "dentist"; About description 167 chars (cut off in Google); 2 titles over 60 chars (Teeth Whitening 61, Pediatric 63).	Several	Medium	S	New

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
T13	**5 "category" treatment pages are thin** (Preventive, Cosmetic, Restorative, Orthodontics, Tooth Replacement)	These pages have a short paragraph only — no benefits, steps or FAQs — so they rarely rank, while 10 specific pages do.	Category entries in `data/services.js` lack `benefits`, `procedureSteps`, `faqs`, `metaTitle`, `metaDescription`; pages are ~37 KB vs ~75 KB for detailed ones. They also overlap with detailed pages (Orthodontics vs Braces/Aligners) → possible keyword competition.	5 treatment pages	Medium	M	New
T14	Weak / unnamed links	Some buttons say only "Book Appointment" or have no name, which tells Google (and blind users) nothing.	`View All →`, repeated `Book Appointment`; map link wrapper and Instagram icon have no accessible name (Lighthouse `link-name`).	Home, footer	Low	S	New
T15	No hreflang / Tamil version	If many patients search in Tamil, they won't find a Tamil page. (Informational — English-only site.)	`<html lang="en">`; no `hreflang`. Add only if a Tamil version is planned (Divya's decision).	All	Low	L	New

Checked and fine: `robots.txt` exists, allows all, no accidental `noindex` / `nofollow` on any page; 404 returns a real 404 status; HTTPS/HSTS; page content server-rendered; `lang="en"` set.

B. AEO (AI answer-engine readiness)

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
A1	**No `llms.txt`**	AI assistants (ChatGPT etc.) have no short "about this business" note to read, so they may describe you incompletely.	`/llms.txt` → 404. Add `public/llms.txt` with clinic summary, address, phone, hours, doctor, treatment list and key URLs.	Site root	Medium	S	New
A2	**Business name written 4 different ways**	AI and Google match businesses by exact name/address; if the name varies, they may treat it as different businesses.	"Phoenix Dental Care" (titles, JSON-LD, copyright), "Dr. Divya's Phoenix Dental Care" (footer/About), "Dr Divya's Phoenix Dental Care" (header, no full stop), "Phoenix Dental Clinic" (WhatsApp pre-filled message in `app/utils/config.js`). Address/phone/email themselves are consistent on all pages (single source `practiceInfo`). Match against Google Business Profile: **Not verified**.	All	High	S	New
A3	FAQs exist on only 10 of 20 pages; **none on Home, About, Contact, or the 5 category pages**	AI assistants love direct question-and-answer content; the most-visited pages have none, so they're less likely to be quoted.	FAQs on the 10 detailed treatments are good (answer-first, plain language). Add general FAQs (timings, fees, parking, emergencies, first visit, children) to Home/Contact.	Home, About, Contact, 5 categories	High	M	New

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
A4	No `sameAs` /profile links; social icons are dead	AI can't confirm you're the same clinic on Google Maps/Instagram, which lowers trust in the answer.	JSON-LD has no `sameAs` ; footer Facebook/Twitter/LinkedIn icons aren't links; Instagram link is an "invite" URL that redirects to instagram.com home. Link real Google Business Profile, Instagram, Facebook.	Footer, JSON-LD	Medium	S	New
A5	Testimonials are only 3 generic quotes, repeated everywhere; no dates and no review markup	Real, recent, varied patient reviews build trust with people and AI.	`testimonials` in `app/utils/config.js` (names "Suresh Kumar", "Priya R", "Arun S"). Authenticity/consent **Not verified** — confirm with Divya. Link to Google reviews instead.	Home + all treatments	Medium	S	New
A6	Opening hours inconsistent between page text and structured data	A patient (or AI) asking "Is the clinic open on Sunday?" could get the wrong answer.	Contact page: "Sunday: By Appointment Only"; JSON-LD lists Mon–Sat 09:00–20:00 only. Verify real timings, incl. lunch break/holidays.	Contact, Home JSON-LD	Medium	S	New
A7	Text inside images	Not a confirmed issue.	Raster images were not visually checked for embedded text (`rate_us.jpeg` , `doctor_profile.svg`). **Not verified.**	—	Low	S	New

Checked and fine: AI crawlers are not blocked (GPTBot, ClaudeBot, PerplexityBot, Google-Extended, Googlebot all receive HTTP 200 and `robots.txt` allows all); FAQ answers are answer-first.

C. Performance

> **Owner: UI/UX team.** Prodman Nexus is not handling these items — please pass this section to your UI/UX team. We will re-check every item in next month's audit.

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
P1	**Huge photos**: `periodontics.jpg` 12.4 MB, `tooth_replacement.jpg` 8.6 MB, `braces.jpg` 6.6 MB, `laser_dentistry.jpg` 4.0 MB (folder is 32 MB)	Phone visitors must download several full camera photos before the page appears — slow loading makes people leave before they see your number.	Lighthouse: Home 11.9 MB mobile / 23.5 MB desktop; LCP 8.7 s / 7.4 s; est. savings 11.4 MB (convert + resize). Photos are up to 5472 px wide but shown at 56–311 px. Fix: resize to ≤1600 px, export WebP/AVIF at ~80%, delete unused `periodontics.jfif` .	Home, Services, treatment pages	Critical	M	New
P2	Home page uses raw `<img>` (no `next/image`), no width/height, no lazy-loading, and **preloads 5 full-size images**	The browser is told to fetch every big photo first, delaying the part patients actually need.	`components/home/treatmentsHero.js` ; `<link rel="preload" as="image">` for laser_dentistry, cosmetic, braces, smile, root_canal in `<head>` . Thumbnails reuse the 6.6 MB `braces.jpg` . CLS 0.085 on mobile. Fix: `next/image` with `sizes` , `priority` only on the one LCP image.	Home	High	S	New
P3	Slow interactivity on mobile Home (TBT 1,180 ms, Speed Index 21 s, TTI 38 s — lab, throttled)	The page may look frozen for a second or more when someone first taps it.	Likely image decoding plus Framer Motion animation on many elements (`FadeUp` , `StaggerContainer`) and the autoplay slider. Root cause not isolated — **Not verified**. Lazy-load below-fold animated sections.	Home	High	M	New

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
P4	**No long-term caching** on images/CSS/JS	Returning visitors re-download the same files every visit.	All checked assets (HTML, `_next/static` CSS, `/images/*`) return `cache-control: public,max-age=0,must-revalidate`. Fix: `netlify.toml` headers — `/_next/static/*` and `/images/*` → `public, max-age=31536000, immutable`.	All	Medium	S	New
P5	Service listing and treatment pages load unoptimised large images	Even inner pages are heavy on desktop (Services 19 MB, Root Canal 18.6 MB).	`/services/` cards and treatment heroes use the same 4–12 MB originals; Root Canal desktop LCP 8.5 s (perf 75). Fixed by P1.	Services, treatments	High	S	New
P6	Hero doctor illustration is 202 KB and preloaded with a relative `../../images/…` path though hidden on mobile	Needless download on phones.	`components/home/ourDoctor.js:33` (`hidden lg:block`); Lighthouse shows preload warning. Optimise SVG; use `/images/…` absolute path.	Home	Low	S	New
P7	Legacy JS polyfills (~11 KiB)	Minor extra code for old browsers.	Lighthouse `legacy-javascript-insight`. Raise `browserslist` target.	All	Low	S	New

Checked and fine: Brotli compression (HTML 52 KB → 9.8 KB); JS/CSS minified; one 30 KB CSS file; fonts self-hosted via `next/font`; Contact page scores 100/100.

D. UI / UX

> **Owner: UI/UX team.** Prodman Nexus is not handling these items — your UI/UX team needs to fix this section. We will re-check every item in next month's audit.

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
U1	**Brand pink text/buttons are too faint** for many readers	Pink-on-white is hard to read for older patients or in sunlight; some people won't notice the buttons.	`#ec4899` on white = **3.53:1** (AA needs 4.5:1) — hero button, headings, active nav, footer title. White on emerald stats bar 2.54:1; white on WhatsApp green 2.28:1. Fix: darker pink (≈`#be185d`, 5.9:1) for text/buttons; darker green. Lighthouse `color-contrast` fails.	Site-wide	High	S	New
U2	**No call or WhatsApp button above the fold** on mobile	Most patients are on phones and want to tap "Call now". Today they must scroll or open the menu to find it.	Header has only "Book Appointment" → `/contact`; hero has the same button. Phone/WhatsApp appear lower (doctor section, footer, contact page). Add header call icon + sticky bottom "Call / WhatsApp" bar on mobile.	Home + all	High	M	New
U3	Home hero image area stays blank for several seconds	The first screen looks half-empty while the 4 MB photo loads.	Observed in the in-app browser at 375 px: text appeared, image frame blank >5 s. Resolved by P1/P2.	Home	Medium	S	New
U4	Statistics show **"0 Years of Experience / 0 Smiling Clients"** until scrolled into view	If scripts are slow, visitors (and screenshots, search previews) see zeros.	`components/Stats.js` counts up from 0 via IntersectionObserver; server HTML contains `0`. Render real values in HTML, animate as enhancement. Claims "10+ years / 1000+ clients" need Divya confirmation.	Home, About	Medium	S	New

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
U5	**Dead/misleading elements**: Facebook, Twitter, LinkedIn icons do nothing; Instagram link goes to instagram.com home; "Privacy Policy" and "Terms of Use" are plain text (no pages)	Looks unfinished and, for a clinic collecting phone numbers, lacks a privacy policy.	`components/footer.js` lines with `<FaFacebookF/>`, `<FaTwitter/>`, `<FaLinkedinIn/>` (no `<a>`); Instagram `invites/contact/?utm_…` URL (HTTP check: resolves to instagram.com root). Add `/privacy-policy`, `/terms`.	Footer (all)	Medium	M	New
U6	Small tap targets	Fingers can easily miss tiny buttons and links on a phone.	Testimonial dots 8×8 px (no name); footer/nav links 17 px tall; Instagram 16×16 px; (guideline 44×44 / min 24×24).	Home, footer	Medium	S	New
U7	Accessibility gaps	People using screen readers or keyboards can't use some parts.	Lighthouse accessibility: Home 74, others 90–91. Failing: `button-name` (slider dots), `frame-title` (map `<iframe>` has no `title`), `link-name`, `heading-order`, `image-alt`, `color-contrast`. Form labels present and linked (good). Autoplay testimonial slider has no pause control. Full keyboard walk-through **Not verified**.	Home, all	Medium	S	New
U8	Text typos / content freshness	Typos make a clinic look careless; old offers confuse patients.	`Offers` in `app/utils/config.js`: "Referal" → "Referral", "friendsand" → "friends and", "Upto 700" (no ₹, unclear unit). Offers, timings, fees are hard-coded; currency of offer **Not verified** — confirm with Divya.	Home	Medium	S	New
U9	"Powered by Netlify" badge visible on the live site	A third-party badge floating over the page looks unprofessional.	Seen in the browser at mobile width; **not** in HTML source, so likely injected by Netlify (plan/feature). Check Netlify site settings.	Home (others not checked)	Low	S	New
U10	"Before & After" gallery empty on every treatment	The project brief lists before/after photos, but none are published.	`beforeAfterImages: []` in `data/services.js`; component hides when empty. Needs Divya's photos + patient consent.	Treatments	Low	M	New
U11	Map is display-only	Fine, but patients can't zoom/drag.	`components/home/map.js` wraps iframe in a link with `pointer-events-none` (opens Google Maps on click). Acceptable.	Home	Low	S	New

Checked and fine: no horizontal scrolling at 375 px; responsive layout; mobile menu has labels, Esc-to-close, `aria-expanded`; form fields have labels and error messages; `tel:`, `mailto:`, WhatsApp links work; WhatsApp/Maps/review links resolve (review link asks Google sign-in as expected). Full-page visual consistency (fonts, spacing) on all pages: only partially reviewed — **Not verified**.

E. Security & Health

> **Note on ownership:** issue **S1 (contact form) is owned by the UI/UX team — Akash, the designer — who needs to fix it and connect it so enquiries reach the clinic.** The other items in this section are handled by Prodman Nexus.

#	Issue	What this means (simple)	Technical detail	Page(s)	Priority	Effort	Status
S1	**Contact form appears NOT to deliver messages**, yet shows "Message Received!"	Patients may fill the form believing the clinic got it — while it silently disappears. These are lost appointments.	`components/ContactForm.js:86` has `// data-netlify="true"` commented out; live `<form>` has no `data-netlify` and no hidden registration form, so Netlify Forms doesn't capture it. `handleSubmit` (line 54) does `fetch("/", POST)` and sets success whenever fetch doesn't throw, **never checking** `response.ok`. A probe POST for an unregistered form returned HTTP 404 — the UI would still say success. Not tested with a real submission (to avoid sending a fake enquiry). Also **no spam protection** (honeypot/reCAPTCHA). Fix: enable Netlify Forms (+ `netlify-honeypot`), or an email API; check `res.ok`; add WhatsApp fallback.	Contact	Critical	S	New
S2	**Outdated Next.js with known vulnerabilities**	The website's engine is 2 years out of date and has publicly known security holes.	`next@14.2.5` — `npm audit --omit=dev`: **5 vulnerabilities (1 critical, 4 high)**: many Next.js advisories (DoS, cache poisoning, middleware bypass, SSRF, RCE variants), `postcss ≤8.5.22`, `sharp <0.35.5`, `source-map-js`. npm also flags next@14.2.5 as deprecated for security. Exposure depends on how Netlify runs it (mostly static) — confirm. Fix: upgrade to latest patched Next 14.2.x/15.x, `npm audit fix`, run build + smoke test.	Site-wide	High	M	New
S3	Missing security headers	The site doesn't ask browsers to apply common protections (against clickjacking, content sniffing, etc.).	Only `strict-transport-security: max-age=31536000` present. Missing: CSP, `X-Content-Type-Options`, `X-Frame-Options` / `frame-ancestors`, `Referrer-Policy`, `Permissions-Policy`; HSTS lacks `includeSubDomains`. Add via `netlify.toml [[headers]]`.	All	Medium	S	New
S4	**Old domain `phoenixdentalcare.in` is down** (HTTP 500 "WordPress › Error")	If patients, Google Business Profile or old links still use it, they land on an error page.	Apex + www return 500; `robots.txt` / `sitemap.xml` also 500. Domain active to 2027-06-24, hosted at Hostinger CDN. Official domain is now confirmed as `drdivyaphoenixdental.com`, so the recommended fix is a 301 redirect of every old URL to the matching new URL (needs access to the old domain's hosting/DNS).	External	High	S	New
S5	Minor code-quality warnings	Not visible to patients; tidy-up for the developer.	`components/home/offers.js` list items lack React `key`; no tests, lint or type-check scripts in `package.json`; README is outdated (wrong repo name, mentions non-existent `styles/`, `next.config.js`).	Repo	Low	S	New

Checked and fine: no mixed content (no `http://` resources); no console errors on Home (other pages' consoles **Not verified**); HTTPS enforced. Backups and Netlify deploy/notification settings: **Not verified**.

3. Page Titles & Descriptions Review

Titles use the template "*[Page]* | Phoenix Dental Care" (23 characters of suffix). Aim: title ≤ 60 chars, description 120–155. All 20 titles and descriptions are **unique** ✔.

Page	Current title (length)	Current description (length)	What's wrong (simple)
Home `/`	Phoenix Dental Care — Chitlapakkam, Chennai (43)	Dr. Divya's Phoenix Dental Care in Chitlapakkam, Chennai — gentle, advanced, and affordable dental care for all ages. Book your appointment today. (146)	Title doesn't say you're a *dentist* — add "Dentist in Chitlapakkam, Chennai". Description is good.
About `/about/`	About Us I Phoenix Dental Care (30)	Learn about Dr. Divya's Phoenix Dental Care — a trusted dental clinic in Chitlapakkam, Chennai, committed to gentle, advanced, and affordable dental care for all ages. (167)	Title too generic (no place/doctor). Description too long — Google will cut it off.
Services `/services/`	Our Services I Phoenix Dental Care (34)	Explore dental treatments at Phoenix Dental Care — from preventive and cosmetic dentistry to orthodontics, root canal treatment, and smile makeovers. (149)	Title generic; add "Dental Treatments in Chennai".
Team `/team/`	Our Doctors I Phoenix Dental Care (33)	Meet the dental team at Phoenix Dental Care. Led by Dr. Divya S, BDS, MDS — a specialist in Pediatric and Preventive Dentistry in Chitlapakkam, Chennai. (152)	Title doesn't name Dr. Divya. Description OK.
Contact `/contact/`	Contact Us I Phoenix Dental Care (32)	Get in touch with Phoenix Dental Care in Chitlapakkam, Chennai. Call us or send a message to book your appointment. (115)	Generic title; description a bit short — add phone number and opening hours.
Preventive Dentistry	Preventive Dentistry I Phoenix Dental Care (42)	Protect your smile before problems begin with routine check-ups, cleaning, fluoride, and sealants. (98)	No location in title; description too short and has no clinic name.
Cosmetic Dentistry	Cosmetic Dentistry I Phoenix Dental Care (40)	Enhance your smile with teeth whitening, veneers, and smile design tailored to boost your confidence. (101)	Same: no location; description short.
Restorative Dentistry	Restorative Dentistry I Phoenix Dental Care (43)	Restore damaged or missing teeth with fillings, crowns, bridges, and dental implants. (85)	No location; description very short.
Orthodontics	Orthodontics (Braces & Aligners) I Phoenix Dental Care (54)	Correct misaligned teeth and improve your bite with traditional braces or clear aligners. (89)	No location; description short; overlaps with Braces/Aligners pages.
Tooth Replacement	Tooth Replacement Solutions I Phoenix Dental Care (49)	Replace missing teeth with dentures, bridges, or implants — restoring function and confidence. (94)	No location; description short.
Root Canal Treatment	Root Canal Treatment in Chennai I Phoenix Dental Care (53)	Painless root canal treatment at Phoenix Dental Care, Chitlapakkam. Save your natural tooth with advanced, gentle procedures by Dr. Divya. (138)	Good.
Dental Implants	Dental Implants in Chennai I Phoenix Dental Care (48)	Restore missing teeth with permanent dental implants at Phoenix Dental Care. Natural-looking, long-lasting results by Dr. Divya in Chitlapakkam. (144)	Good.
Teeth Whitening	Professional Teeth Whitening in Chennai I Phoenix Dental Care (61)	Get a brighter, whiter smile with professional teeth whitening at Phoenix Dental Care, Chitlapakkam. Safe and effective results by Dr. Divya. (141)	Title 1 character too long — may be cut off.
Invisible Aligners	Invisible Aligners in Chennai I Phoenix Dental Care (51)	Straighten your teeth discreetly with invisible aligners at Phoenix Dental Care, Chitlapakkam. Clear, removable, and comfortable orthodontic treatment. (151)	Good.
Braces Treatment	Braces Treatment in Chennai I Phoenix Dental Care (49)	Correct misaligned teeth with professional braces treatment at Phoenix Dental Care, Chitlapakkam. Metal and ceramic braces for all ages. (136)	Good.

Page	Current title (length)	Current description (length)	What's wrong (simple)
Pediatric Dentistry	Pediatric Dentist in Chennai for Children | Phoenix Dental Care (63)	Gentle, child-friendly dental care at Phoenix Dental Care, Chitlapakkam. Dr. Divya specialises in paediatric dentistry for children of all ages. (144)	Title 3 characters too long. "Pediatric" vs "paediatric" spelling mixed.
Laser Dentistry	Laser Dentistry in Chennai | Phoenix Dental Care (48)	Experience gentle, precise laser dental treatments at Phoenix Dental Care, Chitlapakkam. Faster healing, minimal discomfort, and advanced care by Dr. Divya. (156)	Good (description 1 character over the ideal).
Smile Makeover	Smile Makeover in Chennai | Phoenix Dental Care (47)	Transform your smile with a personalised smile makeover at Phoenix Dental Care, Chitlapakkam. Combining cosmetic and restorative treatments by Dr. Divya. (153)	Good.
Gum Care	Gum Disease Treatment in Chennai | Phoenix Dental Care (54)	Treat and prevent gum disease at Phoenix Dental Care, Chitlapakkam. Scaling, deep cleaning, and periodontal therapy by Dr. Divya. (129)	Good. Page heading says "Gum Treatments", URL says "gum-care" — keep names consistent.
Tooth Extraction	Tooth Extraction in Chennai | Phoenix Dental Care (49)	Safe, gentle tooth extraction at Phoenix Dental Care, Chitlapakkam. Simple and surgical extractions with minimal discomfort by Dr. Divya. (137)	Good.

4. Action Plan

One plan, split by who does the work. Within each table, items are ordered by priority — start at the top.

A. Prodman Nexus Solutions

#	Priority	What we do	Why it's needed	What you will see (outcome)	Issue refs
1	Critical	Renew the domain name drdivyaphoenixdental.com on Divya's behalf and switch on auto-renewal	The domain expires on 13 Nov 2026. If it lapses, the website and any email on it stop working.	The website and email stay online without a break.	—
2	Critical	Point all search settings (page addresses, sitemap, Google and social-media previews) to drdivyaphoenixdental.com; add the missing page tags	Google is currently told the website lives at another address that is broken.	Google lists the right website and can find, understand and rank every page.	T1, T2, T3
3	High	Redirect the old address (phoenixdentalcare.in) to the new one	The old address shows an error page, so old links lead patients to a dead end.	Anyone using the old address lands on the real website.	S4
4	High	Update the website software to the latest safe version	The current version has publicly known security weaknesses.	A safer website, less likely to be hacked or taken offline.	S2
5	High	Fix page headings, add descriptions to home-page photos, and set up Google Analytics and Search Console	Search engines and screen readers are confused by the headings and unlabelled photos; today nobody can see how many patients visit.	Better search understanding, and a monthly view of visitors and the searches that bring patients.	T5, T6, T7

#	Priority	What we do	Why it's needed	What you will see (outcome)	Issue refs
6	High	Use one consistent clinic name, and add common patient questions (timings, fees, first visit, children) to Home, About and Contact	Search engines and AI assistants match businesses by exact name and quote pages that answer questions directly.	The clinic is recognised as one business and is more likely to be recommended by AI assistants.	A2, A3
7	Medium	Add proper preview pictures for WhatsApp / Facebook sharing	Shared links currently appear as plain text with no picture.	Shared links look professional and get more clicks.	T4
8	Medium	Add fuller clinic details for Google (photos, map, social profiles, opening hours incl. Sunday)	Google and AI assistants have only partial information about the clinic.	Richer search results; correct answers to "Is the clinic open on Sunday?".	T8, A4, A6
9	Medium	Improve page titles and descriptions (see Section 3)	Several are generic, too short or too long.	More people click the result in Google.	T12
10	Medium	Expand the 5 short treatment pages with benefits, steps and FAQs (Divya supplies details)	These pages are thin, so they rarely rank, unlike the 10 detailed pages.	More patients find the clinic for these treatments.	T13
11	Medium	Tidy web addresses and redirects; confirm which version of the site is live	Pages can be reached by slightly different addresses, and the live site differs from the stored code.	Cleaner Google listings and safer future updates.	T10, T11
12	Medium	Show real patient reviews (Divya supplies them) in place of the 3 generic quotes	Generic quotes build little trust with patients or AI assistants.	More trust from new patients.	A5
13	Medium	Add extra website protections and tidy the code	Only basic protections are switched on today.	A more robust, trouble-free website.	S3, S5
14	Low	Add the site icon for phones and bookmarks, clearer link wording, and a Tamil version if wanted	The clinic shows a blank icon when saved to a phone.	A more finished look; reach Tamil-speaking patients if Divya chooses.	T9, T14, T15
15	Low	Add a short "About this clinic" file for AI assistants (llms.txt) and check images for hidden text	AI assistants have no brief summary to read about the clinic.	More accurate answers about the clinic from ChatGPT, Gemini and Perplexity.	A1, A7
16	Low	Quarterly: review keywords, competitors and structured data	Search trends and Google's rules change.	The site stays competitive and compliant.	—

B. UI/UX team (Akash, designer)

#	Priority	What we do	Why it's needed	What you will see (outcome)	Issue refs
1	Critical	**Fix the contact form and connect it** so every enquiry reaches the clinic (email and/or WhatsApp), then send a test enquiry to confirm it arrives. Prodman Nexus will re-check in the next audit.	Today a patient can fill the form and see "Message Received!" while nothing reaches the clinic.	Every enquiry arrives. No more lost patients.	S1
2	Critical	Shrink and optimise the large photos (home, services and treatment pages)	Some photos are 4–12 MB, so phone visitors wait a long time and leave.	The home page opens in around 2–3 seconds instead of about 9, so more visitors stay and call.	P1, P2, P5

#	Priority	What we do	Why it's needed	What you will see (outcome)	Issue refs
3	High	Make the brand colours easier to read, and add a Call / WhatsApp button that is always visible on phones	Pink text and buttons are faint for many readers, and patients must scroll to find the number.	Easier reading, and more calls and WhatsApp messages from phone visitors.	U1, U2
4	High	Make the home page respond faster on phones	The page can feel frozen for over a second when a visitor first taps it.	Smoother browsing and fewer people leaving in the first few seconds.	P3
5	Medium	Home page polish: image loading, visitor counters showing "0", typos and offer wording, remove the "Powered by Netlify" badge	The first screen looks half-empty for a few seconds, and small mistakes make the clinic look careless.	A cleaner, more trustworthy first impression.	U3, U4, U8, U9
6	Medium	Make tapping and accessibility easier: larger buttons, labelled slider and map, working footer icons, Privacy Policy and Terms pages	Small buttons are easy to miss on phones, some visitors cannot use parts of the site, and dead icons look unfinished.	Easier for everyone, including older patients; a finished, trustworthy footer.	U5, U6, U7
7	Low	Faster repeat visits and lighter files; before/after gallery; interactive map	Returning visitors re-download everything, and the before/after gallery is empty.	Faster repeat visits, and proof of results for new patients.	P4, P6, P7, U10, U11

C. Divya to check — Google Search Console, Google Business Profile & content

#	What to check	Where	Why it matters	How often
1	Pages not indexed, indexing errors and manual actions	Google Search Console	Shows whether Google can find and list every page.	Monthly
2	Core Web Vitals report (real visitors' speed)	Google Search Console	Slow pages lose patients and rank lower.	Monthly
3	Top searches, clicks, impressions and average position, compared with last month	Google Search Console	Shows which searches bring patients and whether we are improving.	Monthly
4	Submit the new sitemap once Prodman Nexus has corrected the website addresses	Google Search Console	Helps Google pick up the corrected pages quickly.	Once, then when pages are added
5	Visitors, calls and form enquiries	Google Analytics 4 (after set-up)	Shows how many patients visit and what they do.	Monthly
6	Name, address, phone and timings (incl. holiday hours) match the website exactly	Google Business Profile	Mismatched details send patients elsewhere and make AI assistants quote wrong information.	Monthly
7	Post 4 updates (1 per week)	Google Business Profile	Fresh posts improve local visibility.	Weekly
8	Reply to all new reviews and ask happy patients for reviews	Google Business Profile	Reviews are the strongest local ranking signal and build trust.	Weekly
9	Send updated timings, doctor details, services, offers, new photos and 2–3 real patient questions for new FAQs	To Prodman Nexus	Keeps the website accurate and gives AI assistants fresh answers.	Monthly

5. Needed From Divya

Need	Why
Domain renewal — handled by Prodman Nexus on Divya's behalf. The domain **drdivyaphoenixdental.com expires on 13 Nov 2026** (32 days from the audit date). We will renew it and confirm once done. Please give us GoDaddy account access or approve the renewal payment, or tell us if you would rather renew it yourself, and confirm the domain is not held under a different account.	If the domain lapses, the website and any email on it stop working.
✅ **Confirmed:** `drdivyaphoenixdental.com` **is the official domain.** Still needed: what `phoenixdentalcare.in` should do (we recommend redirecting it to the official domain) and hosting/DNS access for it.	Unblocks the address fixes (T1–T3) and the old-domain redirect (S4).
Access for Prodman Nexus to Google Search Console (Owner / Full user), Google Analytics 4 (or permission to create one) and Google Business Profile (Manager)	So we can set up tracking and verify our fixes; you keep control of the accounts (T7, A2, A4).
Netlify / hosting and DNS access (Netlify account, NSONE DNS), or the name of whoever set them up	Security settings, redirects, backups, badge check (S3, T10, U9, P4).
Where enquiries should go — email address and/or WhatsApp number for contact-form messages	Needed by Akash to connect the contact form (S1).
Correct, current clinic timings (incl. Sunday, lunch break, holidays) and **fees / offers** (what is "Upto 700"? currency, validity)	A6, U8.
Real patient reviews with consent (or approval to pull Google reviews); **before/after photos** with patient consent	A5, U10.
Original, high-quality clinic and doctor photos	For Akash to optimise, and for photo descriptions (P1, T6).
Confirmation of claims: "10+ years", "1000+ smiling clients", "Associate Professor in Dental College", "painless / laser"	Accuracy of what the site promises (U4).
Social profile URLs (Instagram, Facebook), or approval to remove the icons	U5, A4.
Decision on a Tamil version	T15.
Privacy Policy / Terms text, or approval for us to draft	U5.
Handover to the UI/UX team (Akash): please pass him Sections 2C (Performance) and 2D (UI / UX) and issue S1 (contact form)	These items are fixed by the UI/UX team, not by Prodman Nexus.

6. Monthly Website Care Routine — October 2026

✅ done · ❌ not done · ⏳ pending

Every month — website

Task	Who	This month	Note
Run this audit and compare with last month	Prodman Nexus	✅	First report — nothing to compare yet
Search Console: indexing errors, pages not indexed, manual actions, Core Web Vitals	Divya	⏳	Needs Search Console access
Top search queries, clicks, impressions and average position vs last month	Divya	⏳	Needs Search Console access
Fix new broken links and 404 errors	Prodman Nexus	✅	None found: 20 of 20 internal links work
Update sitemap if pages were added or removed	Prodman Nexus	❌	Sitemap lists the wrong domain (T1, T2)
Run Lighthouse on key pages and keep scores 90+	Prodman Nexus runs · UI/UX team (Akash) fixes	❌	Test done; target not met (Home mobile 39, desktop 64)
Update software and check security alerts	Prodman Nexus	❌	Checked; 5 vulnerabilities open (S2)
Check SSL and domain expiry dates	Prodman Nexus	✅	SSL valid to 25 Dec 2026; domain renews 13 Nov 2026 — renewal handled by Prodman Nexus
Test contact form, call/WhatsApp buttons and map on mobile	Prodman Nexus tests · UI/UX team (Akash) fixes	⏳	Call, WhatsApp and map work; form not tested end-to-end (S1)
Take a full website backup	Prodman Nexus	⏳	Needs hosting access

Every month — content (with Divya)

Task	Who	This month	Note
Publish 2–4 new blog posts or FAQ answers on patient questions	Divya + Prodman Nexus	⏳	Divya supplies topics; we publish
Refresh outdated info (timings, doctor details, services, offers)	Divya	⏳	See Section 5
Add new photos with proper alt text	Divya + Prodman Nexus	⏳	Divya supplies photos
Add 2–3 new FAQs based on real patient questions	Divya + Prodman Nexus	⏳	—

Every month — Google Business Profile & reputation

Task	Who	This month	Note
Post 4 updates (1 per week)	Divya	⏳	—

Task	Who	This month	Note
Reply to all new reviews	Divya	⏳	—
Ask happy patients for reviews	Divya	⏳	—
Verify timings, phone and address are correct (incl. holiday hours)	Divya	⏳	—
Check name, address and phone match the website exactly	Divya	⏳	Website side is consistent; Google side not verified

Every month — AEO check (AI assistants)

Task	Who	This month	Note
Ask ChatGPT, Gemini and Perplexity: "best dentist in Chitlapakkam, Chennai" and "Dr Divya's Phoenix Dental Care details"; record whether the clinic appears and whether the information is correct	Prodman Nexus	⏳	Manual check; results will be recorded next month

Every quarter

Task	Who	This month	Note
Review keywords and competitor rankings	Prodman Nexus	⏳	—
Review structured data against current Google guidelines	Prodman Nexus	⏳	—
Review site design / UX for improvements	UI/UX team (Akash) + Prodman Nexus	⏳	—

Appendix

Issues at a glance
